

# Walking Path and Supports

**Genç Değirmen**  
MILLING MACHINERY

*Excellent Milling Properties...*

## **WORKING PRINCIPLES**

The calculations of walkways are made in consideration of the clearance of support legs, load from the chain conveyors on them, wind load, snow load and other moving loads and produced accordingly. Assembled using screws, the modular system can easily be assembled, needing no maintenance since it is zincplated. All safety constructions can be custom produced as dyed or zinc-plated. All safety constructions are produced using angle iron and are fully joined using screw-type assembly, without any welding. The safety constructions also come with options including a service platform and stairs.
